

IN THE CLAIMS:

Please cancel Claims 7, 8, 14, 15 and 20 to 23 and amend the claims as shown below. The claims, as currently pending in the application, read as follows:

1. (Currently Amended) A management device for connecting a communication control device and a management center, said management device comprising:

wireless communication means for wirelessly transmitting an information signal to ~~wireless communication with~~ said communication control device, wherein the information signal includes an identifier of said communication control device;

memory means for storing an identifier of ~~first identification data for~~ ~~identifying~~ said management device and the identifier of ~~second identification data for~~ ~~identifying~~ said communication control device;

reception means for receiving the identifier of said management device ~~said first and second data~~ and the identifier of said communication control device from said management center that manages said communication control device; and

registration means for registering, in said memory means, the identifier of ~~said management device~~ ~~first data~~ received by said reception means, ~~for identifying said management device;~~ and the identifier of said communication control device ~~second data~~ received by said reception means. ~~means, for identifying said communication control device.~~

2. (Original) A management device according to claim 1, wherein said wireless communication means executes communication for managing, by said management center, a peripheral device connected to said communication control device.

3. (Cancelled).

4. (Original) A management device according to claim 1, wherein said wireless communication means functions as a base wireless station for said communication control device functioning as a mobile wireless station.

5. (Currently Amended) A management device according to claim 1, wherein said registration means registers, in said memory means, ~~identification data for~~ identifying identifiers of plural communication control devices received by said reception means.

6. to 11. (Cancelled).

12. (Currently Amended) A management device according to claim 1, wherein said registration means comprises request means for requesting the ~~identification data~~ identifiers from the management center, and input means for inputting a password for requesting the ~~identification data~~ identifiers.

13. to 15. (Cancelled).

16. (Currently Amended) A method for registering identification data, the method being performed by a management device that performs wireless transmission of information signals to communication with a communication control device using an identifier of the communication control device and connects ~~[[a]]~~ the communication control device and ~~[[the]]~~ a management center, the method comprising steps of:

receiving an identifier of the management device and the identifier of the communication control device ~~first and second data~~ from the management center that manages the communication control device; and

registering, in a memory, the identifier of the management device ~~first data~~ received in said reception step, ~~for identifying the management device~~; and the identifier of the communication control device ~~second data~~ received in said reception step, ~~step, for identifying the communication control device~~.

17. (Cancelled).

18. (Currently Amended) A method according to claim 16, wherein said registration step comprises a step of requesting the management center for the ~~identification data~~ identifiers, and a step of inputting a password for requesting the ~~identification data~~ identifiers.

19. (Currently Amended) A method according to claim 16, wherein said registering step registers, in the memory, ~~identification data for identifying~~ identifiers of plural communication control devices received in said reception step.

20. to 23. (Cancelled).
